

USB to RF remote control transmitter

K8074

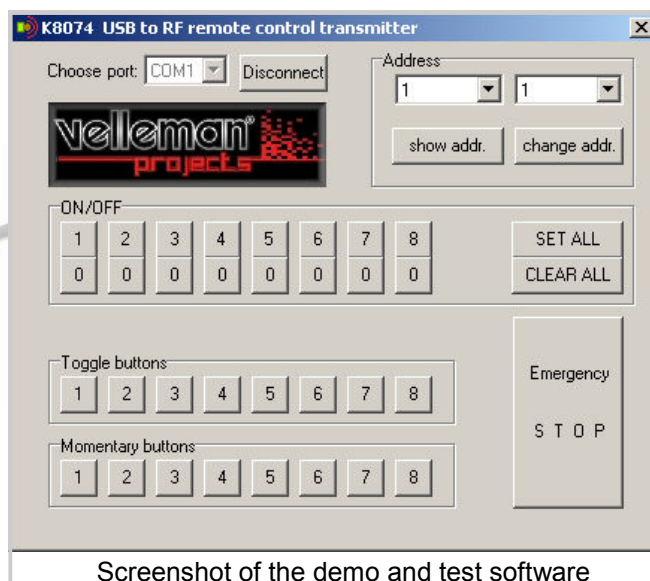

This unit will turn your computer into a powerful remote control.
Simply connect to the USB port, install the driver and you are set.

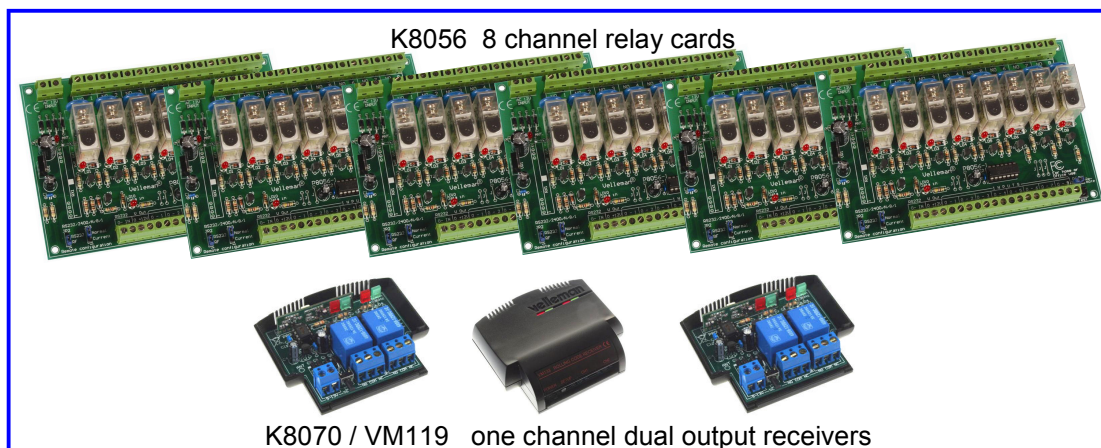

The transmitter works together with our K8056 card, equipped with an RX433 receiver module. Also our K8070 / VM119 one channel receiver can be used. In total a combination of 255 cards can be addressed, resulting in a maximum of 2040 channels !!

Drivers and example software can be downloaded from our web site. A DLL is provided to create your own application.
