

**ATOMIC CHASING LIGHT 7 LED**  
CODE 150 **LEVEL 1**

This circuit is the chasing light circuit. The shape is the same to atomic. This circuit is consist of 7 LEDs. Idea as light-shows for model construction etc.

**Technical specifications:**

- power supply: 9-12VDC.
- consumption: 24-33mA max.
- PCB dimensions : 1.76 x 2.37 inch.

**How to works:**

TR1, TR3 and TR5 is configured as frequency generator. TR1, TR3 and TR5 will step operation 3 steps. The frequency generate is depending on R 10KΩ and C 47 μF which configured as speed of chasing light. TR2 and TR4 are invert the frequency and drive LEDs. R 390Ω is drop for each LED. D3 is the diode feed back of the voltage. When TR3 isn't work, the voltage at the collector of TR3 is fed to the base of TR2 and TR4 through D1 and D3, causing TR2 and TR4 are working simultaneously.

**PCB assembly:**

Shown in Figure 3 is the assembled PCB. Starting with the lowest height components first, taking care not to short any tracks or touch the edge connector with solder. Some tracks run under components, and care should be taken not to short out these tracks. All components with axial leads should be carefully bent to fit the position on the PCB and then soldered into place. Make sure that the electrolytic capacitors are inserted the correct way around. The LED has a flat spot on the body which lines up with the line on the overlay. Now check that you really did mount them all the right way round!

**Testing:**

The board should be given a final inspection before power is applied. After connect the battery 9V to

the circuit. With the positive pole is connected to "+" point and the negative pole is connected to "-" point. All LEDs is chasing to the big arrow shape. Step 1, LEDs is light on at 4 columns of the rear and then Step 2 the rest of LEDs is light on. In the step 3, all LEDs is light off. If you want to increase or decrease the speed of chasing can be adjusted by altering the value of C 47 μF.

**Figure 1. Installing the components**

**Troubleshooting:**

The most problem like the fault soldering. Check all the soldering joint suspicious. If you discover the short track or the short soldering joint, re-solder at that point and check other the soldering joint. Check the position of all component on the PCB. See that there are no components missing or inserted in the wrong places. Make sure that all the polarised components have been soldered the right way round.

**POWER SOURCE**  
9V

**NOTE:**

**FUTURE BOX FB03 is suitable for this kit.**

**NEW KIT SET**

CODE FK	DESCRIPTION	POWER
271	LIGHT ACTIVATE ALARM (COCK VOICE) WITH SPEAKER	3VDC
272	SPACE GUN 3 TONE WITH SPEAKER	9VDC
