

GP2W1001YP0F

IrDA Compliant Transceiver Module
9.6 kb/s to 4 Mb/s (FIR)
Low Profile
Low Consumption Current

■ Description

The **GP2W1001YP0F** is an infrared transceiver module for IrDA ver. 1.4 (FIR).

The transceiver consists of a pin-photo diode, infrared emitter and control IC in a single package.

■ Features

1. Compliant with the IrDA 1.4 (FIR)
Transmission speed : 9.6 kb/s to 4 Mb/s
Transmission distance : 1 m
2. Small package
L 10.0 × W 4.38 × H 3.53 mm
3. Peak emission wavelength : 880 nm
4. Side view type
5. Soldering reflow type
6. Shield type
7. Low consumption current due to shutdown function
(Consumption current at shutdown mode : Max. 1.0 μ A)
8. Operates from 2.7 to 5.5 V

■ Agency approvals/Compliance

1. Compliant with IEC60825-1 class 1 eye safety standard
2. Compliant with RoHS directive (2002/95/EC)
3. Content status of six substances specified in
“ Management Methods for Control of Pollution Caused
by Electronic Information Products Regulation ”
(popular name : *China RoHS*)
(Chinese : 电子信息产品污染控制管理办法)
; refer to page 13
4. Lead (Pb) free device

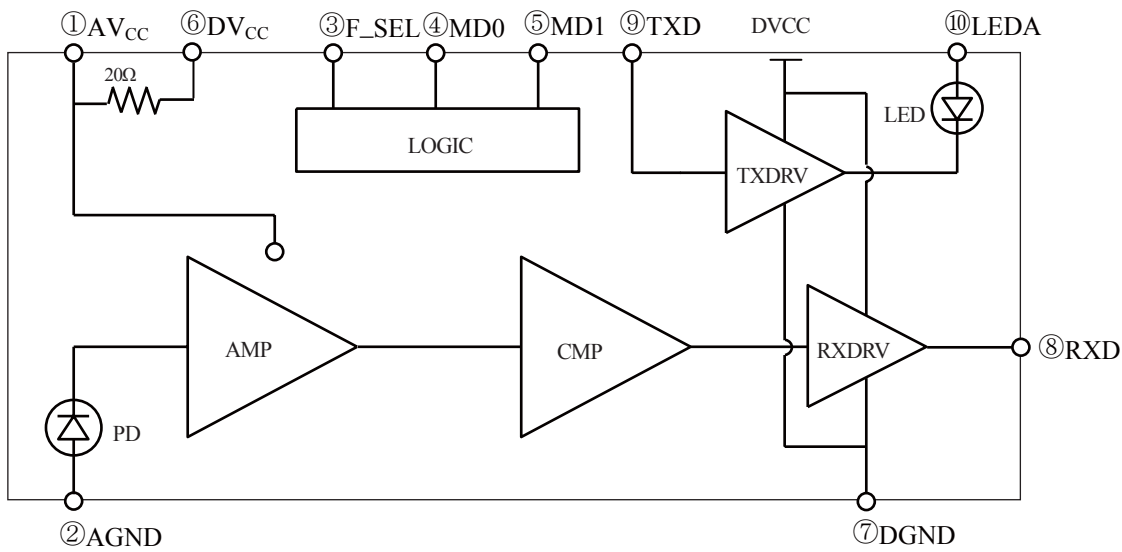

■ Applications

1. Mobile equipment
(Cellular phone, Pager, Smart phone, PDAs,
Portable printer, etc.)
2. Digital imaging equipment
(Digital camera, Photo imaging printer)
3. POS equipment
4. Personal computers
5. Personal information tools

Components	Recommended values
C ₁ ,C ₂	1.0μF±10%(Note)
C ₃	4.7μF±10%(Note)
R _X	1 to 10Ω 1/8W
R _L	2.0Ω±5% 1/2W (V _{LED} =3.3V)
	5.6Ω±5% 1/2W (V _{LED} =5.0V)
C ₄	5.6μF±10%(Note)
C ₅	0.1μF±10%(Note)

(Note)1. Component chooses the most suitable constant of C₁,C₂,C₃,C₄ and C₅ according to the noise level and noise frequency of a power supply. Depending on the noise level of a power supply, and noise frequency, a noise may be unable to be removed only by capacitor of a standard circuit. At this time, pulses other than a signal may be outputted from a RXD terminal in a specific communication distance. Please confirm with the system that it is satisfactory with each transmission speed in all communication distance at the time of examination. When there is a noise ingredient which cannot be removed only by C₁,C₂,C₃, please insert R_x(1 to 10Ω) and it after a check. When there is a problem, please use it after a check as a noise measure Circuit.

2. Don't connect an Avcc terminal with power supply because it is the connection of only capacitor.

Notes

- (1) When the system (program) is designed, the Turn Around Time shall be secured by considering 500 μ s or more that is specified to IrDA.
Then, this Turn Around Time means the time when this device does not temporarily detect the signal light, since the transmitted light from the transceiver reaches the detector side of the transceiver.
- (2) As it is necessary 1.5 ms or more (at $T_a = 25$ °C, no input signal) to return from shut-down mode to ready-operation mode, please consider this point at the system (program) designing.
Also, please confirm thoroughly the operation in actual application.
- (3) When there is much external disturbing light source is located near this transceiver and the detector face receiver much external disturbing light, there is case that the pulse other than signal output is generated as noise on output terminal of this transceiver. Please consider the lay-out and structure to reduce disturbing light on the detector face.
- (4) In case that this sensor is adopted in IR communication system, please use it according to the signal method which is specified by [Serial Infrared Physical Layer Link Specification Version 1.4] published by Infrared Data Association. False operation may happen if the different signal method is used.
- (5) In circuit designing, make allowance for the degradation of light emitting diode output that results from long continuous operation. (50 % degradation/5 years)

■Soldering Method

1. In case of solder reflow

Please carry out only one time soldering at the temperature and the time within the temperature profile as shown in the figure below.

2. Other precautions

An infrared lamp used to heat up for soldering may cause a localized temperature rise in the resin. So keep the package temperature within that specified in Item 1. Also avoid immersing the resin part in the solder. Even if within the temperature profile above, there is the possibility that the gold wire in package is broken in case that the deformation of PCB gives the affection to lead pins. Please use after confirming the conditions fully by actual solder reflow machine.

3. Soldering

- Soldering iron shall be less than 25W, and temperature of point of soldering iron shall use at 260°C or less.
- Soldering time shall be within 5s.
- Soldered product shall treat at normal temperature.

● **Cleaning Instructions**

Solvent cleaning :

Solvent temperature 45°C or less, Immersion for 3 min or less

Ultrasonic cleaning :

The effect to device by ultrasonic cleaning differs by cleaning bath size, ultrasonic power output, cleaning time, PCB size or device mounting condition etc.

Please test it in actual using condition and confirm that doesn't occur any defect before starting the ultrasonic cleaning. The cleaning shall be carried out with solvent below.

Recommended Solvent materials :

Ethyl alcohol, Methyl alcohol, Isopropyl alcohol

● **Presence of ODC etc.**

This product shall not contain the following materials.

And they are not used in the production process for this product.

Regulation substances : CFCs, Halon, Carbon tetrachloride, 1.1.1-Trichloroethane (Methylchloroform)

Specific brominated flame retardants such as the PBB and PBDE are not used in this product at all.

- The RoHS directive (2002/95/EC)

This product complies with the RoHS directive (2002/95/EC).

Object substances: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE)
