CMOS Look-Ahead Carry Generator

Features

- **High Voltage Type (20V Rating)**
- **Generates High-Speed Carry Across Four Adders or Adder Groups**
- **High-Speed Operation**
  - **tPHL, tPLH =100 ns (typ) at VDD = 10V**
- **Cascadable for Fast Carries Over N Bits**
- **Designed for Use with CD40181BMS ALU**
- **100% Tested for Quiescent Current at 20V**
- **5V, 10V and 15V Parametric Ratings**
- **Standardized Symmetrical Output Characteristics**
- **Maximum Input Current of 1μA at 18V Over Full Package Temperature Range; 100nA at 18V and +25°C**
- **Noise Margin (Over Full Package/Temperature Range)**
  - **1V at VDD = 5V**
  - **2V at VDD = 10V**
  - **2.5V at VDD = 15V**
- **Meets All Requirements of JEDEC Tentative Standard No. 13B, "Standard Specifications for Description of 'B' Series CMOS Devices"**

Applications

- **High-Speed Parallel Arithmetic Units**
- **Multi-Level Look-Ahead Carry Generation for Long Word Lengths**

Description

The CD40182BMS is a high-speed look-ahead carry generator capable of anticipating a carry across four binary adders or groups of adders. The CD40182BMS is cascadable to perform full look-ahead across n-bit adders. Carry, propagate-carry, and generate-carry functions are provided as enumerated in the terminal designation below.

The CD40182BMS, when used in conjuction with the CD40181BMS arithmetic logic unit (ALU), provides full high-speed look-ahead carry capability for up to n-bit words. Each CD40182BMS generates the look-ahead (anticipated carry) across a group of four ALU's. In addition, other CD40182BMS's may be employed to anticipate the carry across sections of four look-ahead blocks up to n-bits. Carry inputs and outputs of the CD40181BMS are active-high logic, and carry-generate (G) and carry-propagate (P) outputs are active-low. Therefore the inputs and outputs of the CD40182BMS are compatible.

The CD40182BMS is supplied in these 16-lead outline packages:

Braze Seal DIP	H4V
Frit Seal DIP	H1E
Ceramic Flatpack	H6P

The CD40182BMS is similar to industry type MC14582.

The photographs and dimensions of each CMOS chip represent a chip when it is part of the wafer. When the wafer is separated into individual chips, the angle of cleavage may vary with respect to the chip face for different chips. The actual dimensions of the isolated chip, therefore, may differ slightly from the nominal dimensions shown. The user should consider a tolerance of -3 mils to +16 mils applicable to the nominal dimensions shown.

Dimension in parenthesis are in millimeters and are derived from the basic inch dimensions as indicated. Grid graduations are in mils (10^{-3} inch).
