SN54HCT645, SN74HCT645 OCTAL BUS TRANSCEIVERS WITH 3-STATE OUTPUTS

SCLS019B - MARCH 1984 - REVISED MAY 1997

- Inputs Are TTL-Voltage Compatible
- **True Logic**
- High-Current 3-State Outputs Can Drive up to 15 LSTTL Loads
- **Package Options Include Plastic** Small-Outline (DW) and Ceramic Flat (W) Packages, Ceramic Chip Carriers (FK), and Standard Plastic (N) and Ceramic (J) 300-mil DIPs

description

These octal bus transceivers are designed for asynchronous two-way communication between data buses. These devices transmit data from the A bus to the B bus or from the B bus to the A bus, depending upon the level at the direction-control (DIR) input. The output-enable (\overline{OE}) input can be used to disable the device so the buses are effectively isolated.

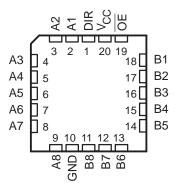

The SN54HCT645 is characterized for operation over the full military temperature range of -55°C to 125°C. The SN74HCT645 is characterized for operation from -40°C to 85°C.

INP	UTS	OPERATION					
OE	DIR	OPERATION					
L	L	B data to A bus					
L	Н	A data to B bus					
н	Х	Isolation

SN54HCT645, SN74HCT645 OCTAL BUS TRANSCEIVERS WITH 3-STATE OUTPUTS SCLS019B – MARCH 1984 – REVISED MAY 1997

logic symbol[†]

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)

To Seven Other Transceivers

SN54HCT645, SN74HCT645 **OCTAL BUS TRANSCEIVERS** WITH 3-STATE OUTPUTS

SCLS019B - MARCH 1984 - REVISED MAY 1997

absolute maximum ratings over operating free-air temperature range[†]

Supply voltage range, V _{CC}	–0.5 V to 7 V
Input clamp current, I_{IK} (V _I < 0 or V _I > V _{CC}) (see Note 1)	
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$) (see Note 1)	±20 mA
Continuous output current, $I_O (V_O = 0 \text{ to } V_{CC})$	±35 mA
Continuous current through V _{CC} or GND	±70 mA
Package thermal impedance, θ_{JA} (see Note 2): DW package	97°C/W
N package	67°C/W
Storage temperature range, T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. CL includes probe and test-fixture capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - C. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: PRR \leq 1 MHz, Z_Q = 50 Ω , t_f = 6 ns, t_f = 6 ns.
 - D. The outputs are measured one at a time with one input transition per measurement.
 - E. tPLZ and tPHZ are the same as tdis.
 - F. t_{P7I} and t_{P7H} are the same as t_{en} .
 - G. tpLH and tpHL are the same as tpd.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
