LM809/LM810 3-Pin Microprocessor Reset Circuits

Check for Samples: LM809, LM810

FEATURES

- **Precise Monitoring of 3V, 3.3V, and 5V Supply Voltages**
- **Superior Upgrade to MAX809/810**
- **Fully Specified Over Temperature**
- **140ms Min. Power-On Reset Pulse Width, 240ms Typical**
  - **Active-Low $\overline{\text{RESET}}$ Output (LM809)**
  - **Active-High RESET Output (LM810)**
- **Ensured RESET Output Valid for V_{CC}≥1V**
- **Low Supply Current, 15µA Typ**
- **Power Supply Transient Immunity**

APPLICATIONS

- **Microprocessor Systems**
- **Computers**
- **Controllers**
- **Intelligent Instruments**
- **Portable/Battery-Powered Equipment**
- **Automotive**

DESCRIPTION

The LM809/810 microprocessor supervisory circuits can be used to monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor during power-up, power-down and brown-out conditions.

The function of the LM809/810 is to monitor the V_{CC} supply voltage, and assert a reset signal whenever this voltage declines below the factory-programmed reset threshold. The reset signal remains asserted for 240ms after V_{CC} rises above the threshold. The LM809 has an active-low $\overline{\text{RESET}}$ output, while the LM810 has an active-high RESET output.

Seven standard reset voltage options are available, suitable for monitoring 5V, 3.3V, and 3V supply voltages.

With a low supply current of only 15µA, the LM809/810 are ideal for use in portable equipment. The LM809/LM810 are available in the 3-pin SOT-23 package and in the 6-Lead SON package.

Connection Diagrams

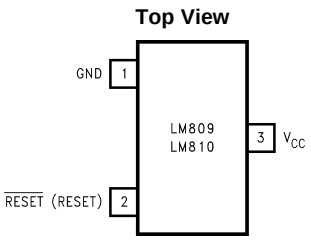

Figure 1. 3-Lead SOT-23-3 Package See Package Number DBZ ( ) are for LM810

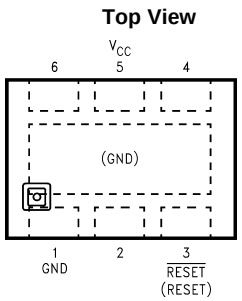

Figure 2. 6-Lead SON Package See Package Number NGB0006A () are for LM810

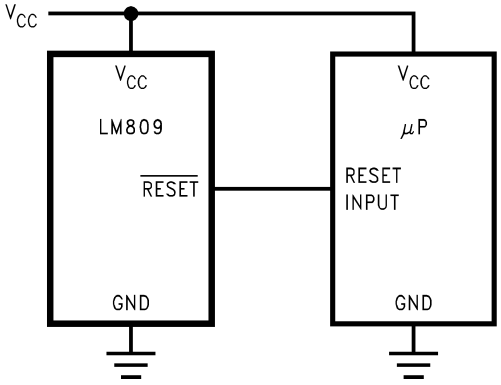
Typical Application Circuit



Pin Descriptions

PIN		NAME	FUNCTION
SON	SOT-23		
1	1	GND	Ground reference
3	2	$\overline{\text{RESET}}$ (LM809)	Active-low output. $\overline{\text{RESET}}$ remains low while V_{CC} is below the reset threshold, and for 240ms after V_{CC} rises above the reset threshold.
		RESET (LM810)	Active-high output. RESET remains high while V_{CC} is below the reset threshold, and for 240ms after V_{CC} rises above the reset threshold.
5	3	V_{CC}	Supply Voltage (+5V, +3.3V, or +3.0V)

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings(1)(2)

V_{CC}		−0.3V to 6.0V
RESET, $\overline{\text{RESET}}$		−0.3V to (V_{CC}+ 0.3V)
Input Current, V_{CC} Pin		20mA
Output Current, RESET, $\overline{\text{RESET}}$ Pin		20mA
Rate of Rise, V_{CC}		100V/µs
ESD Rating(3)		2kV
Continuous Power Dissipation(4)		320mW
Thermal Resistance, θ_{JA}	SON-6	152°C/W
	SOT-23-3	326°C/W
Ambient Temperature Range		−40°C to +105°C
Maximum Junction Temperature		125°C
Storage Temperature Range		−65°C to +160°C
Lead Temperature (soldering, 10sec)		+300°C

(1) Absolute Maximum Ratings are limits beyond which damage to the device may occur. Operating Ratings are conditions under which the device operates correctly. Operating ratings do not imply ensured performance limits. For specified performance limits and associated test conditions, see the Electrical Characteristics.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
(3) The human body model is a 100pF capacitor discharged through a 1.5kΩ resistor into each pin.
(4) At elevated temperatures, devices must be derated based on package thermal resistance. The device in the SOT-23-3 package must be derated at 4mW/°C at ambient temperatures above 70°C. The device has internal thermal protection.

Electrical Characteristics

V_{CC} = full range, T_A = −40°C to +105°C, unless otherwise noted. Typical values are at T_A = +25°C, V_{CC} = 5V for 4.63/4.38/4.00 versions, V_{CC} = 3.3V for 3.08/2.93 versions, and V_{CC} = 3V for 2.63/2.45 version(1).

Parameter		Test Conditions		Min	Typ	Max	Units
	V_{CC} Range	T_A = 0°C to +70°C		1.0		5.5	V
		T_A = −40°C to +105°C		1.2		5.5	
I_{CC}	Supply Current	T_A = −40°C to +85°C	V_{CC}<5.5V, LM8_ _ - 4.63/4.38/4.00		18	60	µA
			V_{CC}<3.6V, LM8_ _ - 3.08/2.93/2.63/2.45		15	50	
		T_A = +85°C to +105°C	V_{CC}<5.5V, LM8_ _ - 4.63/4.38/4.00			100	
			V_{CC}<3.6V, LM8_ _ - 3.08/2.93/2.63/2.45			100	
V_{TH}	Reset Threshold(2)	LM8_ _ -4.63	T_A = +25°C	4.56	4.63	4.70	V
			T_A = −40°C to +85°C	4.50		4.75	
			T_A = +85°C to +105°C	4.40		4.86	
		LM8_ _ -4.38	T_A = +25°C	4.31	4.38	4.45	
			T_A = −40°C to +85°C	4.25		4.50	
			T_A = +85°C to +105°C	4.16		4.56	
		LM8_ _ -4.00	T_A = +25°C	3.93	4.00	4.06	
			T_A = −40°C to +85°C	3.89		4.10	
			T_A = +85°C to +105°C	3.80		4.20	
		LM8_ _ -3.08	T_A = +25°C	3.04	3.08	3.11	
			T_A = −40°C to +85°C	3.00		3.15	
			T_A = +85°C to +105°C	2.92		3.23	
		LM8_ _ -2.93	T_A = +25°C	2.89	2.93	2.96	
			T_A = −40°C to +85°C	2.85		3.00	
			T_A = +85°C to +105°C	2.78		3.08	
		LM8_ _ -2.63	T_A = +25°C	2.59	2.63	2.66	
			T_A = −40°C to +85°C	2.55		2.70	
			T_A = +85°C to +105°C	2.50		2.76	
		LM8_ _ -2.45	T_A = +25°C	2.41	2.45	2.49	
			T_A = −40°C to +85°C	2.38		2.52	
			T_A = +85°C to +105°C	2.33		2.57	
	Reset Threshold Temperature Coefficient				30		ppm/°C
	V_{CC} to Reset Delay(2)	V_{CC} = V_{TH} to (V_{TH} − 100mV)			20		µs
	Reset Active Timeout Period	T_A = −40°C to +85°C		140	240	560	ms
		T_A = +85°C to +105°C		100		840	
V_{OL}	$\overline{\text{RESET}}$ Output Voltage Low (LM809)	V_{CC} = V_{TH} min, I_{SINK} = 1.2mA, LM809-2.45/2.63/2.93/3.08				0.3	V
		V_{CC} = V_{TH} min, I_{SINK} = 3.2mA, LM809-4.63/4.38/4.00				0.4	
		V_{CC} > 1.0V, I_{SINK} = 50µA				0.3	
V_{OH}	$\overline{\text{RESET}}$ Output Voltage High (LM809)	V_{CC} > V_{TH} max, I_{SOURCE} = 500µA, LM809-2.45/2.63/2.93/3.08		0.8V_{CC}			V
		V_{CC} > V_{TH} max, I_{SOURCE} = 800µA, LM809-4.63/4.38/4.00		V_{CC}−1.5			

(1) Production testing done at T_A = +25°C, over temperature limits specified by design only.
(2) $\overline{\text{RESET}}$ Output for LM809, RESET output for LM810.

Electrical Characteristics (continued)

V_{CC} = full range, T_A = −40°C to +105°C, unless otherwise noted. Typical values are at T_A = +25°C, V_{CC} = 5V for 4.63/4.38/4.00 versions, V_{CC} = 3.3V for 3.08/2.93 versions, and V_{CC} = 3V for 2.63/2.45 version(1).

Parameter		Test Conditions	Min	Typ	Max	Units
V_{OL}	RESET Output Voltage Low (LM810)	$V_{CC} = V_{TH}$ max, I_{SINK} = 1.2mA, LM810-2.63/2.93/3.08			0.3	V
		$V_{CC} = V_{TH}$ max, I_{SINK} = 3.2mA, LM810-4.63/4.38/4.00			0.4	
V_{OH}	RESET Output Voltage High (LM810)	1.8V < V_{CC} < V_{TH} min, I_{SOURCE} = 150µA	$0.8V_{CC}$			V

APPLICATIONS INFORMATION

Benefits of Precision Reset Thresholds

A microprocessor supply supervisor must provide a reset output within a predictable range of the supply voltage. A common threshold range is between 5% and 10% below the nominal supply voltage. The 4.63V and 3.08V options of the LM809/810 use highly accurate circuitry to ensure that the reset threshold occurs only within this range (for 5V and 3.3V supplies). The other voltage options have the same tight tolerance to ensure a reset signal for other narrow monitor ranges. See Table 1 for examples of how the standard reset thresholds apply to 3V, 3.3V, and 5V nominal supply voltages.

Table 1. Reset Thresholds Related to Common Supply Voltages

Reset Threshold	3.0V	3.3V	5.0V
4.63 ± 3%			90 - 95%
4.38 ± 3%			85 - 90%
4.00 ± 3%			78 - 82%
3.08 ± 3%		90 - 95%	
2.93 ± 3%		86 - 90%	
2.63 ± 3%	85 - 90%	77 - 81%	
2.45 ± 3%	79 - 84%	72 - 76%	

Ensuring a Valid Reset Output Down to V_{CC} = 0V

When V_{CC} falls below 1V, the LM809 $\overline{\text{RESET}}$ output no longer sinks current. A high-impedance CMOS logic input connected to $\overline{\text{RESET}}$ can therefore drift to undetermined voltages. To prevent this situation, a 100kΩ resistor should be connected from the $\overline{\text{RESET}}$ output to ground, as shown in Figure 9.

A 100kΩ pull-up resistor to V_{CC} is also recommended for the LM810, if RESET is required to remain valid for V_{CC} < 1V.

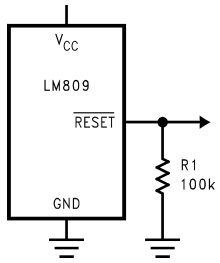

Figure 9. $\overline{\text{RESET}}$ Valid to V_{CC} = Ground Circuit

Negative-Going V_{CC} Transients

The LM809/810 are relatively immune to short negative-going transients or glitches on V_{CC}. Figure 10 shows the maximum pulse width a negative-going V_{CC} transient can have without causing a reset pulse. In general, as the magnitude of the transient increases, going further below the threshold, the maximum allowable pulse width decreases. Typically, for the 4.63V and 4.38V version of the LM809/810, a V_{CC} transient that goes 100mV below the reset threshold and lasts 20µs or less will not cause a reset pulse. A 0.1 µF bypass capacitor mounted as close as possible to the V_{CC} pin will provide additional transient rejection.

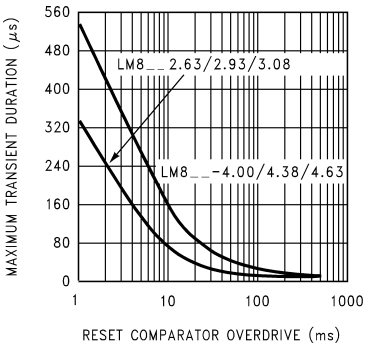

Figure 10. Maximum Transient Duration without Causing a Reset Pulse vs. Reset Comparator Overdrive

Interfacing to µPs with Bidirectional Reset Pins

Microprocessors with bidirectional reset pins, such as the Motorola 68HC11 series, can be connected to the LM809 $\overline{\text{RESET}}$ output. To ensure a correct output on the LM809 even when the microprocessor reset pin is in the opposite state, connect a 4.7kΩ resistor between the LM809 $\overline{\text{RESET}}$ output and the µP reset pin, as shown in Figure 11. Buffer the LM809 $\overline{\text{RESET}}$ output to other system components.

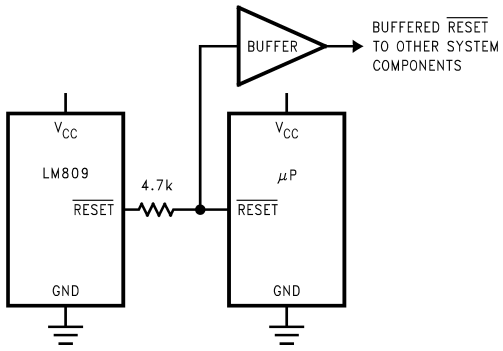

Figure 11. Interfacing to Microprocessors with Bidirectional Reset I/O

SON Mounting

The SON package requires special mounting techniques which are detailed in Texas Instruments Application Note AN-1187. Referring to the section PCB Design Recommendations, it should be noted that the pad style which should be used with the SON package is the NSMD (non-solder mask defined) type.

REVISION HISTORY

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

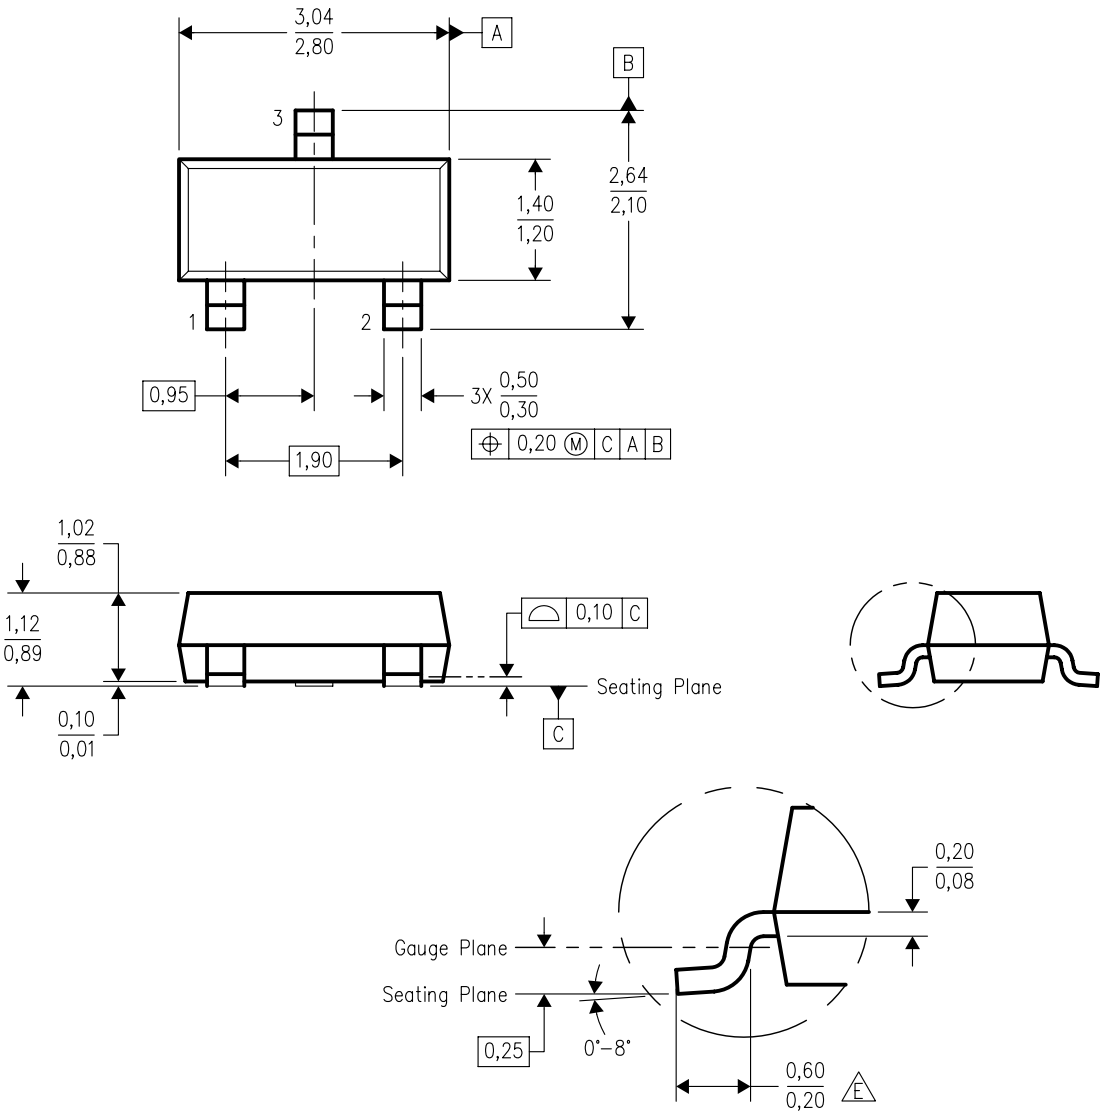
(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

DBZ (R–PDSO–G3) PLASTIC SMALL–OUTLINE



NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Lead dimensions are inclusive of plating.
D. Body dimensions are exclusive of mold flash and protrusion. Mold flash and protrusion not to exceed 0.25 per side.
E. Falls within JEDEC TO–236 variation AB, except minimum foot length.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
