ST-8802
2 in 1 Rework Station User Manual

The soldering iron needs to be tested before it leaves the factory, so the soldering tip may cover a small amount of tin, and the casing will be slightly yellowing, which is a normal phenomenon.

Product warranty

- This product is guaranteed for two years from the date of purchase (excluding consumables such as the heating core). If any quality problem is found within the guarantee period, we will respond for the maintenance free of charge.
- For those products beyond the warranty period, we provide life-long maintenance services.
- For those products damaged due to users' improper application and unauthorized changes to the product parts, our company only provides limited warranty service.
- In case of a product fault, please send the faulty product to the designated maintenance shop for maintenance, and those service center personnel unauthorized by the factory are prohibited from carrying out any maintenance on the product.

6. Password setting function
Under the PSD menu, press left "▲" and "▼" to adjust the password setting value. The password value can be set from "001" to "999". Diagram 2-9 displays the password function is off. Diagram 2-10 displays input into the menu interface. Should enter password and press "2" button to confirm to enter into the menu if you already set password. The password function of the hot air gun and the soldering iron would be set simultaneously.
(Note: Directly enter password 906 to enter the menu interface in case of forgetting the password.)

![Diagram 2-10](image)

7. Button Beeping Function
Under menu BL mode, user can turn on/off the beeping function by pressing right "▲" or "▼" key.
Diagram 2-11, ON enables beeping function; OFF disable beeping function. The beep alarm function of the hot air gun and the soldering iron would be set simultaneously.

![Diagram 2-11](image)

8. Restore Factory Setting
In FAC menu, press right "▲" and "▼" keys to adjust ON/OFF. Press the [2] key when the menu is ON, then return to the normal operation interface to restore factory setting. The restore factory setting function of the hot air gun and the soldering iron would be set simultaneously.

![Diagram 2-12](image)

Default value:
- SLP (Auto sleep): 10
- Loc (temperature locked function): OFF
- CAL (calibration value): cleared
- F-(temperature unit): °C
- PSD (password): OFF
- BL (Beeping function): ON

Copyright information
The design of this product (including internal software) and its accessories is under the protection of relevant state laws. Any violation of the relevant rights of our company will be subject to legal sanctions. Users shall consciously abide by the relevant state laws when using this product.

Description of common icons
Thank you for using our products. Before using the product, please read this manual carefully and pay attention to the relevant warnings and cautions mentioned in this manual.

- Warning: Misuse of this product may lead to serious injury or death to the user.
- Caution: Misuse of this product may lead to serious injury to the user or material damage to the object involved.

Essential knowledge for users
Users are required to have basic knowledge of common sense and electrical operations before using the product. In order to ensure personal safety, only parts and accessories approved or recommended by the original factory can be used, otherwise serious consequences may occur.

**WARNING**
When using this product, the soldering pencil/soldering tip, with the temperature up to 200-480°C, may cause burns to the user or cause a fire due to improper application. So users shall strictly observe the following rules:
- Keep this product away from flammable materials.
- Keep the product out of children's reach.
- Do not use this product if you are inexperienced or have no sufficient necessary knowledge without the guidance of related personnel.
- Do not use this product under wet environment or with wet hands to avoid electric shock.
- Do not modify this product and its accessories without authorization.
- Please turn off the power when replacing parts and iron tips, and do not replace the use until the equipment is completely cooled down.
- Please use the accessories from the original factory. When replacing the product parts.
- Make sure to turn off the power switch when the equipment is temporarily stopped or out of use.

**WARNING**
To ensure the normal operation of this product's ESD function only three-core power cord shall be used as the host connecting line.
- Smoke will be generated during the soldering operation. So please pay attention to the smoke evacuation.
- Do not use this product for purposes other than soldering.
- Do not modify this product and its accessories, otherwise the original warranty will be invalidated or damage may occur to the product.
- Do not hit the product or its accessories too hard during the operation, otherwise damage may occur to the product.

Disclaimer
We will take no responsibility for any personal injury or property damage caused by reasons other than the product quality problem. Which may include force majeure (natural disasters, etc.) or personal behavior during the operation of this product. This manual is organized, compiled and released by SHENZHEN AITEN TECHNOLOGY CO., LTD. according to the latest product features. We will not responsible for further notice of the subsequent improvement of the product and this Manual.
3. Temperature Locking Function
Under Menu Loc, it can turn on or turn off temperature locking function by pressing right "▲" or "▼" key (diagram 2-6). ON means turn on temperature lock function, OFF means turn off temperature locking function; it can turn up or down menu by pressing Button “1” or “3”, then press Button “2” to exit and save your setting.

4. Temperature Calibration
Under menu CAL mode, press right "▲" or "▼" key to enable temperature calibration function, whose calibration range is -50°C~ 50°C(-90°F~90°F). Calibration value will be negative as actual-measured temperature is lower than setting temperature; Calibration value will be positive as actual-measured temperature is higher than setting temperature.

Note: User need calibrate temperature by adjusting its value if the displayed temperature is much different with actual-measured temperature after changing a new heater or tips, its calibration method be refered as below:
1. Set this handle required calibration as a suitable temperature like 350°C/662°F;
2. After this setting temperature is stable, use temperature tester to measure the actual temperature of its tip, for example, its actual-measured temperature is 365°C/689°F;
3. We can get conclusion that the actual-measured temperature is 15°C/27°F higher;
4. Then press "▲" key to calibrate temperature.

5. Switching Temperature Unit
Under menu C-F mode, it can switch temperature units(°C&°F) by pressing right "▲" or "▼"key. (diagram 2-8) set -C- which means temperature unit is °C ; set -F- which means temperature unit is °F ; (The temperature unit of the hot air gun and the soldering iron would be switched simultaneously.)

Note: please plug soldering iron handle into the interface pin of soldering station when connecting handle with soldering station.
Menu Mode

Under normal work, press right "1"+"3" button more than 3 seconds to enter the password input interface. No password for the first time, press 2 button to enter the menu mode, then input password to enter. Press the 2 button on the menu to exit and save the settings. (Note: After all the functions are set, press 2 to save the settings)

1. Button Definition under Menu Setting Mode.

   Soldering station power key

2. Auto-sleep function

Under the SLP menu, press right "▲" and "▼" to set the sleep parameters: Off/On Time: 10~60 (default 10) minutes; the heater temperature is 200 °C under sleep status. (diagram 1-14) open the auto sleep function, and the sleep time is 20 minutes. (display OFF) turn off the auto sleep function. In sleep mode, pick up the soldering tool or press any key to automatically resume normal operation. (Note: If the device is not in a static state, it will affect the device to enter auto sleep)

LCD Description

![LCD Description Diagram]

| Hot air station displayed by the left side, soldering station displayed by the right side. |
|---|---|
| 1. REAL : Real Temperature status |
| 2. SET : Start up and set temperature status |
| 3. Display bar for heating power status |
| 4. Actual temperature value |
| 5. Symbol for lock |
| 6. Fan icon |
| 7. Temperature unit |
| 8. Air flow percentage |
| 9. Preset temperature value |
| 10. Air volume value |
How to operate soldering station

The right side is for soldering station operation area, left side is for hot air station operation area. Both of them work independently.

Power on soldering station and the temperature setting

The screen will be displayed (diagram 2-1) after turning on the power key, the soldering station are still closed, should turn on the soldering station power key to start soldering iron. Under working status press right “↑” or “↓” key (diagram 2-3) to adjust temperature (diagram 2-2). Long press to adjust quickly, stop to press key after 3 seconds to save temperature value automatically. (The temperature value cannot be adjusted when locked)

Retrieving and Saving Shortcut Temperature (User define)

Under normal working status, Retrieving shortcut temperature: It can rapidly retrieving preset temperature as current working temperature. by pressing right button “1” “2” “3”. (diagram 2-3)

Under normal working status, Saving shortcut temperature: It can save the current working temperature into memory. by long pressing button “1” “2” “3” more than 3 seconds.
6. Password setting function
Under the PSD menu, press left "▲" and "▼" to adjust the password setting value, the password value can be set from "01" to "999". Diagram 1-13 display the password function is off. Diagram 1-14 display enter into the menu interface. Should enter password and press "2" button to confirm to enter into menu if you already set password. The password function of the hot air gun and the soldering iron would be set simultaneously.
(Note: Directly enter password 906 to enter the menu interface in case of forgetting the password.)

![Diagram 1-13 and 1-14]

7. Button Beeping Function
Under menu BL mode, user can turn on/off the beeping function by pressing right "▲" or "▼" key. Diagram 1-15, ON enables beeping function; OFF disable beeping function. The beep alarm function of the hot air gun and the soldering iron would be set simultaneously.

![Diagram 1-15]

8. Restore Factory Setting
In FAC menu, press left "▲" and "▼" keys to adjust ON/OFF. Press the [2] key when the menu is ON, then return to the normal operation interface to restore factory setting. The restore factory setting function of the hot air gun and the soldering iron would be set simultaneously.

![Diagram 1-16]

Default value:
- HT (Timing operation): OFF
- Loc (temperature locked function): OFF
- CAL (calibration value): Cleared
- F-C (temperature unit): °C
- PSD (Password): OFF
- BL (Beeping function): ON

---

How to operate hot air station

The right side is for soldering station operation area, left side is for hot air station operation area. Both of them work independently.

Temperature/Air flow setting

Its temperature can be adjustable by "▲/▼" key on the left when normal working (diagram 1-4), can be adjusted rapidly by pressing the key for long time, will auto-save this setting temperature without pressing for 3 seconds. Air volume can be adjusted by air volume knob, adjusting with clockwise means adding air volume, counterclockwise means reducing air volume. (Temperature and volume can't be adjusted if these parameters locked)

![Diagram 1-4]

Retrieving and Saving Shortcut Temperature (User define)

Preset temperature/air volume can be retrieved rapidly by pressing left Button 1/2/3 when normal working (diagram 1-5).
Preset temperature/air volume can be saved when normal working, current setting temperature/air volume can be saved in button 1/2/3 by pressing button 1/2/3 longer than 3 seconds.

![Diagram 1-5]
Cool air function
The hot air gun enter into cool air mode when the setting temperature value under 100° C, shortcut key “#” defaults to cool air mode. Cool air mode display C-L (diagram 1-6) and heater element not heat, the air gun blows cool air then the heater quickly cool down.

Menu Mode
Under normal work, press left “1+” button more than 3 seconds to enter the password input interface. No password for the first time . press 2 button to enter the menu mode, then input password to enter. Press the 2 button on the menu to exit and save the settings. (Note: After all the functions are set, press 2 to save the settings)

1. Button Definition under Menu Setting Mode

![Diagram 1-7]

- Parameter plus
- Parameter minus

Button “1”: Menu page up
Button “2”: Menu exit
Button “3”: Menu page down

2. Defining Work Function
Under the HT menu, press left “▲” and “▼” keys to adjust the timed working time, [1] [3] key to switch menu up or down, [2] key to exit and save setting values. Display OFF to turn off timing function. The minimum setting time is 10 seconds and the maximum is 900 seconds. (Diagram 1-8) the timing work time is 900 seconds. (Note: the timing function is effective after hot air gun starting to work next time.)

![Diagram 1-8]

3. Temperature Locking Function
Under Menu Loc, it can turn on or turn off temperature locking function by pressing left “▲” or “▼” key (Diagram. 1-10, ON means turn on temperature lock function, OFF means turn off temperature locking function); it can turn up or down menu by pressing Button “1” or “3”, then press Button “2” to exit and save your setting.

![Diagram 1-10]

4. Temperature Calibration
Under menu CAL mode, press left “▲” or “▼” key to enable temperature calibration function, whose calibration range is -50°C ~ 50°C(-90°F~90°F). Calibration value will be negative as actual-measured temperature is lower than setting temperature; Calibration value will be positive as actual-measured temperature is higher than setting temperature.

![Diagram 1-11]

Note: User need calibrate temperature by adjusting its value if the displayed temperature is much different with actual-measured temperature after changing a new heater or tips, its calibration method be refered as below:
1. Set this handle required calibration as a suitable temperature like 350°C/662°F.
2. After this setting temperature is stable, use temperature tester to measure the actual temperature of its tip, for example, its actual-measured temperature is 365°C/689°F.
3. We can get conclusion that the actual-measured temperature compared to the setting temperature is 15°C/27°F higher.
4. Then press “▲” key to calibrate temperature.

5. Switching Temperature Unit
Under menu C-F mode, it can switch temperature units (°C & °F) by pressing left “▲” or “▼” key (Diagram. 1-12, set “C” which means temperature unit is °C; set “F” which means temperature unit is °F; (The temperature unit of the hot air gun and the soldering iron would be switched simultaneously.)

![Diagram 1-12]
